

Project Title: **C-08-09 : Mainstreaming Climate Change Adaptation Strategies Into New York State Department of Transportation’s Operations**

PIN: R021.34.881

Responsible Unit: Engineering Division, Office of Technical Services

Project Manager: Elrahman, Sam

Project Goal:

The goal of the synthesis and workshop is to educate managers from various programs about what current research has concluded with regard to the physical, financial and/or operational impacts climate change can be expected to have on their program area. Program managers, armed with this information, will then be prepared to assess the implications specifically on the New York State transportation system. Program managers will also be in a better position to craft a consultant scope of services tailored to New York State’s needs, should New York State decide to seek consultant services for a “Gulf Coast”

Actions Proposed:

Review past studies on what climate change might do to the transportation system; assimilate this information by NYSDOT program area, prepare a written synthesis, and present the information in a half-day workshop in Albany, New York.

Anticipated Work Products and Accomplishments:

Synthesis Report; Workshop Handouts; Workshop Conducted

Proposed Budget: \$37,711
